Business /Banking Global Server

SENDER AND RECEIVER PROCESSING TO CLOSE

- The funds start as Net Zero off Ledger Funds, with no cash value.
- Then they must take the ISIN #, and collateralize it, and trade it up to within the banks so they can MAKE the money to bring up the money to On Ledger, M1 funds.
- The process takes many Main Banks and Central banks to be peered together, often times in excess of 20-40 banks. It can be more.
- It is the Receiver's Collateral which allows this to happen, and they put on the line for this to work.
- ➤ This must be 100% Project driven.

 The projects for this are for United Nations, and Global Projects.
- ➤ No exceptions.
- ➤ The entire process from Compliance to Contract takes 30-45 days depending on the size, complexity, and cooperation of the Sender.
- ➤ It takes a hard working Sender to make it through this processing, but the benefits outweigh the work involved. Good Luck!
